Your contributions represent the main fuel that generates the growth of your savings. In 2025, the IRS allows you to contribute up to \$23,500 to your plan, \$31,000 if you're age 50 or older. (Amounts can vary by plan.) The more you save, the greater the potential accumulation over time. The earlier you start can make a big difference, too.

Keep in mind that boosting your pretax contribution has less impact on take-home pay than you may think because the amount you contribute lowers your taxable income for the year.

Every little bit counts

Even a small increase in your workplace retirement plan deferral rate can make a big difference in the size of your savings. Say you're 30 years old, earn an annual salary of \$52,000, and get paid biweekly. Deferring 2% of your salary to your plan may reduce your take-home pay by \$28, but by age 65 you could potentially accumulate more than \$174,000 in retirement savings. Defer another 2% and you could gain another \$174,000. The chart below shows the impact saving 2% more can make.

Savings-rate assumptions include 3% annual raises and 6% annual investment returns, calculated using the "Retirement Contribution Effects on Your Paycheck" tool at bankrate.com.

As a rule of thumb, try to put 10% – 15% of your income toward your retirement. It's an easy-to-remember target, and the sooner you start to save, the likelier you may be to reach your financial goals. Check your progress by using the Contribution Planner at LincolnFinancial.com/ContributionPlanner.
