

Filing for Social Security

CHOICES FOR YOUR RETIREMENT INCOME

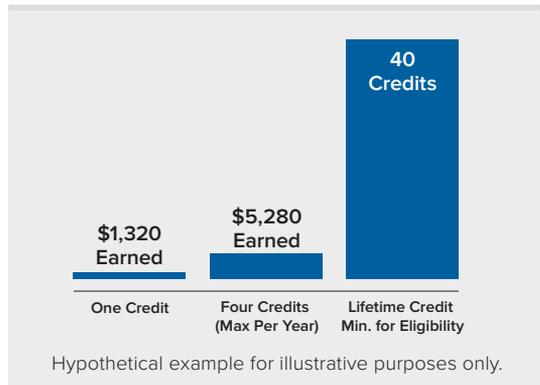

Social Security was created in the mid-1930s to offer economic security during financial and economic crises in the U.S. It was intended to be a supplement for retirement, but today it is the single largest federal program and the sole means of support for many retirees.

Retirement choices

ELIGIBILITY

To be eligible to receive benefits, you must earn 40 work credits during your working lifetime. You earn credits as you earn income. In 2018, you will receive one credit for every \$1,320 of earnings. Once you have earned \$5,280, you have received full work credits for this year. It takes about 10 years of work to accumulate 40 work credits.

YOUR BENEFIT

Your Social Security benefits are based on your lifetime earnings. The Social Security Administration averages your 35 highest earnings years as the basis of your Primary Insurance Amount (PIA), also referred to as your Full Retirement Benefit.

You can receive your Full Retirement Benefit at your Full Retirement Age (FRA). For an estimate of your Full Retirement Benefit amount, see your Social Security statement.

Social Security statements can be accessed online at ssa.gov/myaccount.

FULL RETIREMENT AGE

Your FRA is the single most important number you need to know when deciding when to file, how to file, and what kind of benefits you will receive from Social Security. The Social Security Administration determines your FRA based on the year in which you were born. Please understand, it is not the age you stop working.

Find your FRA

Year of birth	FRA
1943–1954	66
1955	66, 2 months
1956	66, 4 months
1957	66, 6 months
1958	66, 8 months
1959	66, 10 months
1960 or later	67

More information can be found at ssa.gov/planners/retire/ageincrease.html

EARLY RETIREMENT BENEFITS

If you choose, you can file for and begin receiving Social Security benefits at 62. However, your benefit will be reduced based on the number of months you filed before your FRA. Reasoning? When you file early, the Social Security Administration anticipates paying your benefit for a longer period of time. Therefore, it pays you less each month.

For example, if your FRA is 66 and you elect to file for benefits at 62, your PIA will be reduced 25% for filing 48 months prior to your FRA.

Year of birth	FRA	Early retirement benefit (as % of full retirement benefit)
1943–1954	66	75.00%
1955	66, 2 months	74.17%
1956	66, 4 months	73.33%
1957	66, 6 months	72.50%
1958	66, 8 months	71.67%
1959	66, 10 months	70.83%
1960 or later	67	70.00%

Benefit reductions vary by FRA. To compute the effect of early retirement, go to ssa.gov/OACT/quickcalc/early_late.html#calculator

DELAYED RETIREMENT CREDITS

Just as Social Security reduces your benefit if you file early, conversely, it increases your benefit if you file after your FRA. Why? It assumes it will pay you for a shorter period of time.

If you were born in 1943 or after, you will receive an 8% increase in benefits – per year – for each year you delay benefits until 70. After 70, delayed credits cease; therefore, it is never recommended to delay benefits after 70.

Year of birth	FRA	Delayed retirement benefit (as % of full retirement benefit)
1943–1954	66	132.00%
1955	66, 2 months	130.67%
1956	66, 4 months	129.33%
1957	66, 6 months	128.00%
1958	66, 8 months	126.67%
1959	66, 10 months	125.33%
1969 or later	67	124.00%

To calculate the effect of delayed retirement, go to www.ssa.gov/OACT/quickcalc/early_late.html#calculator

EARLY VERSUS DELAYED RETIREMENT

*Based on estimated average monthly Social Security benefits payable in January 2018.

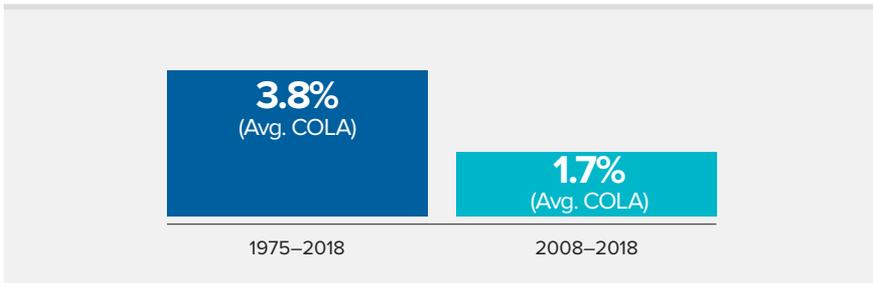

Hypothetical example for illustrative purposes only.
The example assumes the individual was born in 1952.

CONSIDER THIS...

Cost-of-Living Adjustment (COLA)

Automatic cost-of-living adjustments went into effect in 1975. Any increases in benefits are linked to the Consumer Price Index for Urban Wage Earners (CPI-W).

In 1980, benefits were increased by 14.3% when inflation was at an all-time high. Thirty years later in 2010 and 2011, Social Security had back-to-back years of 0% inflation, and in 2018 COLA will be 2%. The average COLA since 1975 is 3.8%, yet the latest 10-year average is only 1.7%.

Cost of health care

Health care costs represent a larger share of total spending in retirement. The average person over 65 spends 31% on health care compared to 9% for those 55–65.¹

A 65-year-old couple retiring today can expect to spend \$275,000 on health care throughout retirement.² That amount assumes you qualify for Medicare coverage and does not include costs like over-the-counter drugs, most dental services and long-term care. It also assumes retirement ends in 20 years – around 85. Imagine the increase in costs if you live past 85. Per the Social Security Administration, one-third of 65-year-olds today will live to age 90 and more than one in seven will live to age 95.³

Collecting Social Security while working

You can get Social Security retirement or survivors benefits and work at the same time. But, if you're younger than Full Retirement Age (FRA), and earn more than certain amounts, your benefits will be reduced. The amount that your benefits are reduced, however, isn't gone forever. Your benefit will increase at your full retirement age to account for benefits withheld due to earlier earnings.

- In 2018, if you work and start collecting benefits before FRA, your benefits will be reduced \$1 for every \$2 you earn above the earnings threshold of \$17,040.
- If you reach FRA in 2018, your benefits will be reduced \$1 for every \$3 you earn above the earnings threshold of \$45,360.
- Starting with the month you reach FRA, there is no limit on how much you can earn and still receive your benefits.

Other retirement income

If you are a public employee – such as a federal civil service employee, state or local government employee, police officer, firefighter, teacher – and will receive a pension, your Social Security benefit may be reduced if your employer does not withhold Social Security taxes from your salary. In this situation, the Windfall Elimination Provision determines the impact on your Social Security benefit.

The Government Pension Offset applies to dependents of public employees. Under this law, if you will receive a pension and your employer does not withhold Social Security from your salary, your spouse's spousal or survivor Social Security benefits may be reduced.

Lastly, if you will receive a pension from the private sector, ask your Human Resources department if a Social Security offset will reduce your pension benefit.

Benefit taxation

Your Social Security benefits may or may not be subject to income taxes. In fact, about half of Social Security recipients had to pay income taxes on their benefit.¹

Depending on your provisional income, up to 85% of your Social Security benefit is subject to income taxes. Provisional income is the sum of your adjusted gross income, nontaxable interest and 50% of your Social Security benefits.²
