Fixed index annuities are not a direct investment in the stock market. They are long-term insurance products with guarantees backed by the issuing company. They provide the potential for interest to be credited based in part on the performance of specific indices, without the risk of loss of premium due to market downturns or fluctuation. Although fixed index annuities guarantee no loss of premium due to market downturns, deductions from the accumulation value for optional benefit riders or strategy fees or charges associated with allocations to enhanced crediting methods could exceed interest credited to the accumulation value, which would result in loss of premium. They may not be appropriate for all clients. Interest credits to a fixed index annuity will not mirror the actual performance of the relevant index.

Premium taxes: Accumulation value will be reduced for premium taxes as required by the state of residence.

GLWB roll-up percentage is not applied to the accumulation value, only to the GLWB value. The GLWB value is not available for withdrawal, surrender or as a death benefit. There is no GLWB roll-up when lifetime income payments have been elected.

GMDB roll-up percentage is not applied to the accumulation value, only to the GMDB amount, which is used to determine the death benefit amount. The GMDB amount is not available for withdrawal or surrender.

NOTE: The GLWB and GMDB cannot be elected together, and cannot be elected on inherited IRAs or nonqualified stretch accounts. Please see the product disclosure for details.
